

README.md

YOUR PORTFOLIO — COMPONENT PACKAGE

Design direction

This package follows the visual language of the supplied reference portfolio: minimal dark interface, mono HUD labels, high-contrast typography, animated micro-interactions, a custom pointer, a liquid CTA, and text-decode animation.

Important

The uploaded reference files identify themselves as excerpts from a private portfolio and explicitly state that they are read-only/not licensed for reuse. The five files in this package are newly written implementations of the same general interaction ideas rather than copied source code.

Known portfolio content incorporated

-
1. Developer / software-building focus.
 2. Python JARVIS assistant project with app-launching automation.

Not invented

The supplied conversation context does not contain a verified list of your college/course names, certifications, complete skills list, GitHub URL, LinkedIn URL, email, phone number, or full project descriptions. Those fields should be filled from your actual portfolio information rather than guessed.

Suggested portfolio sections

HERO

Your Name

Full-Stack / AI Developer

Short one-line introduction

View Projects / Contact

ABOUT

Concise personal introduction and development interests.

SKILLS

Add only your verified technologies and tools.

PROJECTS

JARVIS Assistant

- Python-based personal assistant
- App launching / automation
- Local AI tooling

EDUCATION / COURSES

Add your exact course names, institutions, dates, and certifications.

CONTACT

Email / GitHub / LinkedIn / other verified links.

Component usage

CursorDot.tsx

Global desktop custom cursor.

Hud.tsx

Live India time and compact status metadata.

LiquidButton.tsx

Primary CTA such as "View Projects" or "Get in touch".

ScrambleText.tsx

Hero name, role, section headings, and project labels.

Next step

Replace the verified profile-content placeholders in your main page/content files. Do not copy the private reference portfolio's source code, branding, personal data, or protected assets.
